

Create a single page application. The app has 2 main screens, Intro & Sort.

Intro screen

How many numbers to display?

Enter

- Clicking “enter” button takes to next screen, Sort.

Sortscreen

[illegible]

Numbers buttons:

- Show X random numbers (depends on data entered by user in the previous screen)
- The max number value is 1000
- At least one value should be equal or less than 30
- Present maximum 10 numbers in a column. If there are more numbers, add another column

Sort button:

- Clicking the sort button will sort the presented numbers in a descending order
- Clicking the sort button again, will change it to increasing order
- The screen should be updated after each iteration of quick-sort (i.e. re-implement quick-sort; copy/paste of existing implementation is permitted).

Reset button:

Takes back to intro screen.

Clicking one of the numbers button:

- If the clicked value is equal or less than 30, present X new random numbers on the screen
- If the clicked value is more than 30, pop up a message "Please select a value smaller or equal to 30."
